Education

New York University, Steinhardt **Expected May 2027**
Master of Science in Applied Statistics for Social Science Research
GPA: 4.0

BrainStation Data Science Bootcamp, London, UK **November 2022**
Admitted with a full scholarship to twelve week bootcamp.

Boston University, College of Arts and Sciences **January 2020**
Bachelor of Arts in Economics and Mathematics, Minor in Computer Science
Dean's List Spring 2018, Fall 2018 and Spring 2019

Peer Reviewed Publications

Research Experience

Research Assistant **Summer 2026 - Present**
Supervisor: Dr. Klint Kanopka

Sparse Variational Autoencoders for Item Response-Like Modeling

- Self-led investigation into adapting a deep generative model to Multidimensional Item Response Theory. Adapted model to recover interpretable parameters.
- Built three exploratory variational autoencoders in PyTorch.
- Evaluated efficacy of sparse decoding (through spike and slab priors) to identify models in space, using paranormal beliefs data.
- Tuned priors and created training visualizations for parameter interpretation.
- Authored a comparison about the relationship between this novel method and traditional psychometric models.

NYU QUEER Data Lab, Research Assistant **Fall 2025 - Present**
Supervisor: Dr. Daphna Harel

Don't worry, I asked ChatGPT: Investigating use of Generative artificial intelligence among sexual and gender minorities and cisgender heterosexual individuals.

- Led statistical analyses and evaluation of methods to derive perceptions from an AI use and sentiment survey, wrote the code to do so in R.
- Conducted a statistical literature review of modeling options and communicated the implications to the lab, leading the selection of the final modeling strategy.
- Fit factor analyses and a multi-level model to compare estimated marginal mean uses and perceptions of AI across sexual and gender minority+ groups.
- Collaboratively wrote the statistical methods, results, and discussion sections.

Research Assistant **Fall 2025 - Present**
Supervisor: Dr. Marc Scott

What Counts? The Use of History in Sequence Analysis and Prediction

- Set up cross validation paradigms to evaluate a novel feature creation method, using categorical functional data analysis, against traditional methods for sequence analysis.
- Methods included hard and soft clustering, using sequence-based distance metrics, principal component analysis and established sequence metrics features.
- Built the framework for a simulation study as well as benchmarked real-world data.
- Performed sensitivity analyses on all methods to ensure a "fair" competition. Tuned parameters and built a test set assignment function for soft clustering.
- Developed visualizations to compare time-varying representations of sequences.
- Wrote the Methods section and several appendices regarding sensitivity analyses, collaborated with Professor Scott on writing the remainder of the paper.

The Branching Tree of the Life Course: Incorporating History in Sequences Analysis

- Fit hard and soft clustering, with sequence-focused distance metrics, on subsequences of school-to-work transition data for comparison against a method of modeling multi-phase latent classes, utilizing model-based clustering.
- Developed visualizations of state probabilities, across time for comparison against visualizations from model based clustering with transition points method.
- Wrote the appendix describing the distance based clustering method.

Course Projects

Can LLMs Compare to Human Content Moderators? **Fall 2025**
Messy Data and Machine Learning | NYU Course Project for APSTA-GE 2047

- Performed the technical and statistical work of a group project comparing LLM against crowd-sourced ratings of content moderation on X's Community Notes.
- Created a subset of conclusive content moderation notes, and corresponding ratings.
- Developed a prompting pipeline, in R, to generate synthetic content moderation ratings from the LLM. Iterated over prompts to ensure a strict form of output data, to allow for modeling.

- Fit random forest and logistic regression models on human-ratings training data to benchmark the relationship between ratings survey variables and outcomes. Compared performance of test set of LLM survey responses against corresponding withheld human-ratings set.
- Explored limitations of an overfit model due to large differences found in LLM survey responses.

Exploring Recommendation System Suitability by User History Depth **Fall 2022**
Capstone | BrainStation
- Built four recommendation systems in Python to compare users with varying levels of listening history. Recommenders included a popularity based, content based and two collaborative filtering systems based on latent feature processing.
- Presented findings in an interactive presentation with real-time recommendations.

Professional Experience

Quantitative Student Specialist | NYU Data Services **May 2026 - Present**
- Provide cross-disciplinary quantitative research consultations to members of the NYU community, focusing on statistical software support (R, Stata) as well as data cleaning and manipulation.
- Lead R coding tutorial "Data Wrangling in R". Adapted content to modern R practices.
- Collaborate with subject area specialists and data librarians to support research data lifecycle.

Machine Learning Engineer Intern | Durable **Spring-Summer 2023**
Louisville, CO
- Built a Retrieval Augmented Generation model by customizing code of pre-trained Hugging Face encoders and generators.
- Developed pre-training for the retrieval system to ensure encodings took on bespoke language form necessary for integration with code synthesis paradigm. Created bespoke evaluation metrics for pre-training based on the retriever's ranking.
- Designed a training pipeline, using PyTorch Lightning and ClearML reporting.
- Collaborated closely with the full start-up team, of 6, to integrate the model into the product.

Teaching

Teaching Assistant | NYU APSTA-GE 2047 **Fall 2026**
Messy Data and Machine Learning
- Scaffolded curriculum for recitation sessions throughout the semester. Wrote lab sessions on training neural networks using torch in R.
- Led recitation sections for 34 graduate students and held office hours to discuss concepts and homework problems.
- Consulted on group project planning and modeling feasibility.

- Set up batch homework autograding for coding problems and hand graded written responses.

Teaching Assistant | NYU APSTA-GE 0021 **Spring 2026**
Cracking the Code

- Developed and led an Introduction to R programming lecture for non-technical undergraduate students.
- Led a lecture and lab sessions teaching students to use the programming language R, in RStudio.
- Held office hours to discuss coding projects, concepts and homeworks.

Coursework

Graduate	**Undergraduate**
Frequentist Inference	Linear Models
Bayesian Inference	Probability
Causal Inference	Linear Algebra
Multi-Level Modeling	Differential Equations
Supervised and Unsupervised Machine Learning	Combinatronic Structures
Messy Data and Machine Learning	Behavioral Economics
Generalized Linear Models	Game Theory
Data Science for Social Impact	Empirical Econometric Analysis I&II

Skills & Technologies

Advanced R (base, tidyverse, ggplot)
Advanced Python (Pandas, Numpy, Scikit-learn)
PyTorch, PyTorch Lightning, SQL, Git, Stata
